FOR IMMEDIATE RELEASE

INTRODUCING EMAIL SERVICE GUIDE

MOUNTAIN VIEW, CA -- WireLoad has today unveiled a major new addition to their portfolio of email products. The new product is named Email Service Guide (ESG) and is a refreshing alternative to all pay-for-the-top-spot email hosting top-lists. The objective of ESG is simple: based on set of criteria, it will find the best email service provider.

There is no all-around-best email provider
Instead of trying to find the best all-around email provider, ESG will find the best email hosting service based on the users' needs. Unlike any other tool available, ESG can answer questions such as:

- Who is the cheapest provider that supports IMAP and offers 8GB storage per user?
- What providers offers Microsoft Exchange hosting with 99.999% or more Service License Agreement (SLA)?
- Where can I find email hosting powered by renewable energy?

Transparent side-by-side comparison

Once ESG has found the best matches based on the given criteria, it provides a transparent side-by-side comparison with data formatted in a uniform fashion.

More than different 100 email plans

From the getgo, ESG features more than 100 different email plans from all of the leading email providers on the market.

Email Service Guide is available today at <http://www.EmailServiceGuide.com>
