

Migrate your email in style

YippieMove is all about making your email life easy. Email was invented to make communication faster and easier - yet there are times when it's anything but. If you have ever been in a situation where you needed to leave an email account behind, you know that migrating (or transferring) all those emails from one account to another can be a real challenge. YippieMove makes this a breeze. With YippieMove, you no longer need to be a tech-savvy engineer to figure out how to transfer your email.

Best of all, YippieMove has been designed to integrate seamlessly with Gmail. This means you can get hooked up with one of the leading email providers in minutes.

...And There's More

Even if we didn't get around to adding your particular provider to our list yet, we are giving you the power to do it yourself. Our advanced interface, found under the 'Other' provider heading, allows you to configure almost any email service out there. If your email service supports IMAP, chances are it will work with YippieMove. (There are certain email providers we cannot support due to lack of IMAP support. This includes some common email providers such as restricted web mail services, e.g. Yahoo! Mail and Hotmail, and POP3-only services, e.g. BellSouth and Comcast.)

The YippieMove Advantage

Simplicity: With our easy to use presets you don't need to be an email expert. Just answer a few questions and you're ready to go.

Speed: Our servers are hooked up with high speed internet connections. A transfer that could take days with an average at home broadband internet connection could finish in hours with our servers.

Hands Off Processing: Once you've set up the job you can go and do something else. Your computer and attention won't be hogged by the process.

With a minimal amount of fuzz and time spent, you can have your email in a new home before tomorrow. Preserve your full emails without having to go through the frustrating experience of forwarding email by email.
